

# Boat Cover Mooring Bags

Carver Boat Cover Mooring Bags are designed to secure the boat cover while mooring. Each kit includes four (4) bags to be weighted with sand (not included).

## Installation Instructions:

1. Fill each bag three-quarters full with clean, dry sand (not included) and close by securing the hook and loop fastener. Each filled bag should weigh approximately 7-8 lbs.
2. Unfasten the quick-release buckles and attach the bags to the tie-down loops in the hem of the boat cover. For best results, space bags evenly around the perimeter of the cover. Larger boats will require more than one set of bags. Even distribution of the weight will help provide sufficient tension to secure the boat cover.

 *To avoid possible damage to the boat, remove bags prior to trailering.*
